FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.
THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC
MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING OF HETEROGENEOUS CELL TYPES. N-CADHERIN MAY BE INVOLVED I
NEURONAL RECOGNITION MECHANISM.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BB0214;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page 40; 58pp; English.

C Pharmaceutical preparations for tolerisation to antigens comprise either an isolated human non-collagen or non-myslin basic protein (MBP) polypeptide which is capable of tolerising an individual to an autoantigen; or an isolated human pathogen polypeptide capable of tolerising an individual to that polypeptide. In both cases, the polypeptide (whether self or non-self) includes an amino acid sequence corresponding to a sequence motif for a MHC class II sequence corresponding to a sequence motif for a MHC class II protein, such as HIA-DR, which is associated with a human autoimmune disease and which binds to the polypeptide to activate autoreactive T-cells in individuals with the autoimmune disease. This peptide is charited from the human desmoglein a protein (amino acids 206-220) and is implicated as a self epitope in pemphigus vulgaris. Peptides derived from the human desmoglein protein are described in W04841-47.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   acids to phagocytic cells. In one embodiment the microparticles are less than 20 microns in diameter and the nucleic acid (preferably in closed circular form) includes an expression control sequence operatively linked to a coding sequence, where the expression product of the coding sequence is a polypeptide having a length and a sequence which permits it to bind to an MHC class I or II molecule. The expression product is thus an effective stimulator of an immune response in mammals. The present sequence, an antigenic portion of desmoglein 3, is an example of an MHC class II peptide which can be expressed by the nucleic acid. It is associated with pemphigus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   expression of proteins e.g. in gene therapy
Disclosure; Column 4; 42pp; English.
The patent describes a new preparation of microparticles each
Comprising a polymeric matrix and a nucleic acid. The polymeric
matrix consists of one or more synthetic polymers having a solubility
in water of less than 1 mg/1 (e.g. poly-lactic-co-glycolic acid);
and at least 90% of the microparticles have a diameter of less than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (PANG-) PANGAEA PHARM Curley JM, Hedley ML, WPI; 98-427077/36.
                                                                                                                                                                                                                                                                                           Fused protein recognised by pemphigus vulgaris auto:antibody useful to treat and diagnose pemphis vulgaris claim 1; Page 7-9; 9pp; Japanese.
W07908 represents the human pemphigus vulgaris (PV) antigen extracellular region. The PV antigen is produced in patients with pemphis vulgaris resulting in autoimmune disease. PV is a rare relapsing disease causing suprabasal, intra-epidermal bullae (vesicles) of the skin and mucuous membranes, which is fattal if untreated. The PV antigen was fused to a human IgG1 hinge region and the resulting fusion protein is useful to treat or diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expressed vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pemphigus vulgaris antigen protein extracellular region.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             용
                                                                                                                        remphigus foliaceus antigen-IgG constant region fusion protein - linked through the hinge region used to treat pemphigus foliaceus Claim I; Page 10-12; Typ; Japanese.

This sequence represents a fused protein recognised by pemphigus foliaceus this sequence represents a fused protein recognised by pemphigus foliaceus is a chronic perotein through the hinge portion. Pemphigus foliaceus is a chronic, generalised, vesicular and scaling skin eruption similar to dermatitis herpetiformis. The pemphigus foliaceus antigen fusion protein is useful to treat pemphigus foliaceus. The antigen is especially administered through an adsorbent upon which the fusion useful for detecting pemphigus foliaceus antibodies which is useful in immunocodiagnosis. The fusion protein has little or no side effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

Asparagine synthetase AS1.
asparagine synthetase; transgenic plant; herbicide resistance;
asparagine introgen fixation; pea.
                                                                                                                                                                                                                                                                                                                                     A comparison of pea AS and human AS polypeptides reveals homology of 47% at the amino acid level, c.f. 86% between AS2. There are several regions of high local homology (g. 80%) shared between the pea AS and human AS polypeptides see also Q06598, Q06622 and Q06623.
                                                                                                                                                                                                                                                                                                                                                                                                                       transgenic plants
Disclosure; Fig 2B; 91pp; English.
Disclosure; Fig 2B; 91pp; English.
The DNA sequence encoding this protein was isolated from cDNA
Clones selected from a pea nodule cDNA library from the "Sparkle"
variety of P.sativum. Pea ASI cDNA was used as a probe.
The protein is produced by expression vectors containing the AS2
coding sequence. Recombinant AS can be used to engineer herbicide
resistance, as a dominant selectable marker, to select novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Asparagine synthetase AS2. asparagine synthetase; transgenic plant; drought tolerance; nitrogen fixation; per

TRESULT OF THE STATE OF THE STA
PS Claim 12; Page 407; 483pp; English.

CThis sequence represents a Streptococcus pneumoniae protein that, based on homology with an Escherichia coli protein, is a aspartate ammonia con induction and is encoded by a DNA sequence of the invention.

CT ligase, and is encoded by a DNA sequence of the invention set rain of the invention can be used to identify compounds which interact with and continuous pneumoniae strain of the continuous pneumoniae proteins. Antagonists can be used to identify compounds which interact with and continuous pneumoniae proteins. Antagonists can be continuous to a tireat diseases caused by S. pneumoniae proteins, through genetic continuous pneumoniae proteins or delivery confirmed an ammonia by inoculation with the S. pneumoniae proteins or delivery confirmed immune responses to protect the animal from disease. The continuous can also be used to identify antimicrobial compounds which are capable of inhibiting their bloactivity. In particular the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           plant asparagine synthetase - includes DNA expression system and transgenic plants
Disclosure; Fig 2A; 9lpp; English.
The DNA sequence encoding this protein was isolated from cDNA clones selected from a pea nodule cDNA library from the "Sparkle" variety of p. sativum. Human AS cDNA was used as a probe.
The protein is produced by expression vectors containing the AS1 coding sequence. Recombinant AS can be used to engineer herbicide resistance, as a dominant selectable marker, to select novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Streptococcus pneumoniae protein; genetic immunisation; antagonist; immunological response; inoculation; antibody production; inhibitor; T cell immune response; antimicrobial compound; bacterial adhesion; extracellular matrix protein; protein-mediated cell invasion; wound;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   W38654

This cc R8885-R86867 represent the sequences for three protocadherins. This created to cadherin, and possess cell adhesive ability. Cadherins are crelated to cadherin, and possess cell adhesive ability. Cadherins are composed of an N-terminal extracellular domain cathering in the cell-cell adhesion. Cadherins are composed of an N-terminal extracellular domain continuous continuous composed of an N-terminal extracellular domain continuous continu

CC The present sequence is a segment of the desmosomal cadherin (DC), CC desmoglein Dsg2, which is exposed on the surface of epithelial or CC arcinoma cells and not bound to desmosomes. An antibody (Ab) CC directed against epitopes of the present sequence can be used to CC diagnose, i.e. to detect carcinoma cells, especially micrometastases, not bound to desmosomes. An ontibody of the present sequence can be used to CC diagnose, i.e. to detect carcinoma cells, especially concretastases, not bound to desmosomes, to separate, enrich or detect living or fixed carcinoma cells by cell sorting methods and CC as a therapeutic to deliver agents, e.g. other Ab or toxins, to CC metastatic carcinoma, and detects parts of DC that are not accessible in desmosome bound cells, as in normal tissue or
                                                                                                                                                                                                                         Antibody reactive with part of desmosomal cadherin - exposed on surface of epithelial or carcinoma cells, not bound to desmosomes, we seem to fereigness and treatment of carcinoma micrometastases of claim 7; Page 5; 8pp; German.

The present sequence is a segment of the desmosomal cadherin (DC), and the desmosome of epithelial or carcinoma cells and not bound to desmosomes. An antibody (Ab) of carcinoma cells and not bound to desmosomes. An antibody (Ab) of carcinoma cells and not bound to desmosomes, an antibody (Ab) of carcinoma cells and not bound to desmosomes, to separate, enrich or detect living or fixed carcinoma cells, especially micrometastases, not bound to desmosomes, to separate, enrich or detect living or fixed carcinoma cells by cell sorting methods and cas a therapeutic to deliver agents, e.g. other Ab or toxins, to metastatic carcinoma, and detects parts of DC that are not accessible in desmosome bound cells, as in normal tissue or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                              DNA encoding a low affinity interleukin-12 receptor - used to bind or scavenge IL-12 to cause immune suppression, e.g. to suppress graft-vs-host reaction, allograft rejection or inflammation, and to treat autoimmune conditions Claim 4; Page 24-27; Slpp; English.

A cDNA library of PHA-activated peripheral blood mononuclear cells in vector pEF-BOS was screened for interleukin-12 (IL-12) receptor cDNAs by panning. An isolated cDNA was sequenced (Q83844); it encoded a 662-mmino acid low affinity IL-12 receptor (R69632). Recombinant IL-12 receptor was expressed in COS cells, and can be used for therepartic or diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              R69632;

          New interleukin-12 beta-2 receptor and high binding affinity complexes - have a high affinity for interleukin-12, and are used to receptor treat autoimmune diseases S Claim 8; Page 37-41; 53pp; English.

Ruman interleukin-12 (IL-12) receptor beta-1 receptor (W12772) has a low binding affinity for IL-12, but when complexed with an IL-12 beta-2 receptor (see also W12771), forms a complex with a deduced from a cDNA clone (T59732) obtd. from human lymphoblasts. Claim 12 receptor beta-1 can be expressed on the surface of transformed host cells as a complex with co-expressed IL-12 receptor beta-2, and used in therapeutic compsns., pref. with at least 1 cytokine antagonist, to treat autoimmune dysfunctions such as rheumatoid arthritis, inflammatory bowel disease and multiple store for the surface of the surface

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Jun 11 17:32:12 1999; MasPar time 4.36 Seconds 137.938 Million cell updates/sec

Tabular output not generated.

Perfect Score: Sequence: Title: >US-08-991-628-4 (1-15) from US08991628.pep 108 1 TPMFLLSRNTGEVRT 15

scoring table:

PAM 150 Gap 15

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

pir60 1:pir1 2:pir2 3:pir3 4:pir4

Database:

Mean 27.020; Variance 36.303; scale 0.744

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

submitted to the EMBL Data Library, February 1994
The biogenesis of C-type cytochromes in Escherichia col
requires an integral membrane protein with a protein
disulphide isomerase like domain.
                                                                                                                                                                                                                       submitted to the EMBL Data Library, December 1994 The sequence of S. cerevisiae cosmids 9537, 9581, and lambda clone 5898.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Jun 11 17:29:22 1999; MasPar time 2.45 Seconds 172.912 Million cell updates/sec

Tabular output not generated.

Sequence: Description: Perfect Score: Title: >US-08-991-628-4 (1-15) from US08991628.pep 108 1 TPMFLLSRNTGEVRT 15

Scoring table: PAM 150 Gap 15

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 27.687; Variance 32.651; scale 0.848

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS.
INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDI
FILAMENTS MEDIATING CELL-CELL ADDESION.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: EPIDERMIS, TONGUE, TONSILAND OESOPHAGUS.
-!- DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS
